Abstract (en)  
[origin: WO0220924A1] The invention relates to a locking device (1) for a door, comprising at least one bolt for locking and unlocking the door, a locking cylinder and at least one handle (2) for opening the door. The bolt is coupled to the locking cylinder and the handle (2) by means of a coupling (13). The handle (2) is used to actuate the locking cylinder. An electronic control unit (12) and at least one mobile identification carrier are interlinked by wireless data transmission means, to verify the access authorisation and to control the locking device (1). Said locking device (1) has circuit elements (3) for this purpose. The circuit elements (3) are connected to the control unit (12) and the latter (12) can be activated by said circuit elements (3) when the handle is (2) actuated.
