Abstract (en)

Dishwashing machine with a functional unit (2, 3) capable of sliding into a pulled-out, ie. extracted position, in which a dripping partition wall (8) extends transversally across the washing vessel (1) of the machine, thereby dividing it into separate compartments (9, 10). When the functional unit slides back into its retracted closed position, the wall (8) shrinks into a compact retracted condition enabling the compartments (9, 10) to fully communicate with each other again. <IMAGE>
