Abstract (en)  
[origin: EP1316513A1] The container (1) holding an additive is installed in a floating upright position inside a fluid container, and by a piston (6) which moves in the direction of the additive container's axis (x) is divided into a lower chamber (4) with an opening (2) to accommodate the additive (15) and for the dosed delivery of additive into the fluid, and an upper pressure chamber (5) with at least one small external hole (7) to receive the gas volume. The additive container is in the form of a cylinder and has a length which corresponds at least to the clear diameter of the fluid container.
