Abstract (en)
[origin: EP1316647A1] Conveying system comprises a traveling path (3) composed of rails (2) and along which a conveying car (4) moves. The traveling path has at least one transfer rail section (5) which is able to move by a transfer device (6) relative to both connecting rails (7, 8) of the traveling path between a transfer position (9) and a processing position (10). At least one of the connecting rails has a stationary rail part (11) and a pendulum rail part (12) pivoting with the transfer device. <??>Preferred Features: The pendulum rail part pivots relative to the stationary rail part about an essentially horizontal axis running across the traveling path.
