Abstract (en)

[origin: WO022817A2] The present invention relates to a novel nuclear receptor called "L66" or also FXR- beta a homologue of the FXR- alpha , a prototypical type 2 nuclear receptor. The invention also relates to the isolated nucleic acid sequence of L66 and the isolated protein thereof. The invention further relates to processes for isolating and/or producing the nucleic acid or the protein as well as methods of use of the receptor L66.
