Abstract (en)  
[origin: WO0222833A1] Die vorliegende Erfindung betrifft ein Polypeptid mit vorzugsweise antitumoralen und/oder immunmodulierenden Zytokineigenschaften, welches durch Prozessierung <i>in vivo</i> aktivierbar ist, umfassend eine zentrale Region mit spezifischer biologischer Aktivität, an dessen C-terminalen Ende sich eine Region mit einer Prozessierungseinheit und einer Inhibitor-domäne befindet, während sich am N-terminalen Ende eine Region befindet, die ein Makromolekül auf einer Zelloberfläche oder eine Komponente der extrazellulären Matrix selektiv erkennt.  
[origin: WO0222833A1] The invention relates to a polypeptide having preferably antitumoral and/or immunomodulating cytokine properties which can be activated by processing it <i>in vivo</i>. Said polypeptide comprises a central region that has a specific biological activity. At the C-terminus, said region comprises a region with a processing unit and an inhibitor domain while at its N-terminus it comprises a region that selectively recognizes a macromolecule on a cell surface or a component of the extracellular matrix.
