Abstract (en)  
[origin: WO0179612A1] The invention relates to a device for preparing paving material, which is intended for the manufacture of hot paving materials. The device for preparing paving materials includes heating devices (13) for the aggregate and devices (10, 11, 12) for feeding the aggregate to the heating devices (13), as well as screening devices (14) and hot silos (17) for the screened aggregate. The device for preparing paving material also includes a batching bin (18) and mixing devices (19) for mixing the batch being moved from the batching bin (18) to form a ready-to-use paving material. The heating and screening devices (13, 14) are arranged to form a drum screen (15), which is supported on its own support members (16). The hot silos (17) and the batching bin (18) are arranged beneath the drum screen (15).
