Abstract (en)
[origin: WO0221058A1] The invention relates to a refrigeration device with a fixing system for a horizontal evaporator (2), located in at least one cold chamber (1). The fixing system fundamentally comprises retaining elements (7), by means of which the evaporator is rigidly mounted and thus rendered immovable, such that noises and vibration which occur with other, conventional fixing systems, can be avoided. The retaining elements (7) serve not only as fixing means of the evaporator, but also as guides for the compartments (14) of the refrigeration device and as stops to limit the displacement of the compartments (14) whilst the same are being withdrawn.
