Abstract (en)  
[origin: WO0221177A1] An optically interrupted linear fiber optic light strip (30) that includes a core (32), a clad (34), a first jacket material (36) that is made of substantially a translucent, white or other light color material, a second jacket (40), made of a black or dark opaque material, and a plurality of cuts, notches or other indented optical interruptions (38) in the form of "Vs", squares or rectangles or other configurations extending through the two jackets, the cladding and into the fiber optic core, together with, optionally, a third or outermost jacket, made of a clear, protective material, which fiber optic strip may, optionally be illuminated with relatively high power LED source(s), or conventional incandescent light source(s) by placing the light sources at either end or both ends of the light guides.
