Abstract (en)
[origin: WO0221223A1] The invention relates to a device for activating an electronic control unit. Said device comprises at least one operational control (31 to 34), actuated by an operator, in addition to analogue coding elements (21 to 24) that are allocated to the operational control (31 to 34). In order to generate an activation signal for an electronic control unit (20), the device is provided with deactivation elements (41 to 44, 51 to 54) that deactivate at least one analogue coding element (21 to 24), to allow the digital coding of the operational element (31 to 34).
