Abstract (en)

[origin: WO0208952A2] The invention relates to a method for selecting, processing and displaying data or data objects that are stored in a predetermined hierarchy in addressable memory locations of a data processing system. The hierarchy has a tree structure with a trunk and branched-off subdivisions. The inventive method allows the association or common processing of data or data objects (13 to 16, 22 to 23, 30) derived from listings in different levels of hierarchy of the tree structure in a common table.
