Abstract (en)

[origin: WO0223821A1] The invention concerns a method for managing the use of a telecommunication line and/or a terminal connected thereto. The invention is characterised in that it consists in controlling the use of the line for any access to a broadband service, operated on said line so as to: control the setting up of said line for each access request for a broadband service (for example ADSL), measure the duration of occupancy of said line for each of said accesses, control the cutting of said line at the end of each of said accesses or on detecting a fraud. The invention is applicable to a public telephone system and in particular to Internet terminals for public use.
