Abstract (en)

[origin: EP1318081A1] The present invention relates to soft pocket packages for absorbent tissue sheets, such as handkerchiefs or cosmetic tissues. Typically such packages contain more than a single tissue sheet. In order to extract a single sheet from such a package, it is necessary to provide an opening in the package such as a cutout in the package material allowing access. According to the present invention the opening is asymmetric in at least two cartesian coordinates, preferably resembling a sail design. <IMAGE>
