Abstract (en)

[origin: EP1318092A2] The run-off (13) and fresh (15) webs of material are drawn off by a run-off (14) and new (16) bobbin (14) respectively positioned on a support-pin (10.11) each, and conveyed to a splice unit (19). The run-off and fresh webs are deflected by rollers (23,24). Double-sided adhesive tape is supplied to the run-off web and pressed onto the side of the run-off web facing the fresh web. The run-off web is cut through by a knife at a position following the tape.
