Abstract (en)

[origin: WO0224416A1] The invention concerns a tool handle consisting of a core (2) designed to be secured to the screwdriver shank (1), and a plastic sleeve (3) arranged around the core, the core and the sleeve comprising protuberances (9, 20) for mutual positioning in rotation and means (5, 10, 11, 14, 17, 21, 22) for mutual positioning in axial translation. The sleeve (3) is a component separate from the core, consisting of a semirigid plastic material and slipped on through the front onto the core (2).
