Abstract (en)

[origin: WO0223036A1] The invention relates to a valve configuration for control valves. Said valve configuration operates by means of graduated throttling using throttling points (5) which are arranged in the supply on the high pressure side (2) and in the discharge on the low pressure side (17). Said throttling is carried out by a blocking element (7, 32, 36) in order to avoid cavitation erosion.
