Abstract (en)
[origin: WO0211232A1] The invention relates to a device comprising a capacitor (200) for altering the impedance of a section of a coplanar waveguide. According to the invention, the capacitance of the capacitor (200) can be altered, the signal line (120) of the section of the waveguide is interrupted at a predetermined length (122), a first connection (130) connects the grounding lines (110, 111) of the waveguide, and the second connection (121) connects both parts of the interrupted signal line (120).
