Abstract (en)

[origin: WO0223881A1] The invention relates to a device (1) for remote-controlled door opening, comprising at least one signal generator (5), a door unit (2) with a release mechanism (12) and a remote operation unit in the form of a telephone apparatus (3) with at least one mobile piece (11). The door unit (2) is connected, by means of an at least partly wireless signal transmission unit, to the telephone apparatus (3) and configured such that operating the release mechanism (12) may be carried out by means of a spoken signal which may be given into the mobile piece (11) of the telephone apparatus (3).
