Abstract (en)
[origin: EP1319381A2] Wheelchair comprises a chassis, seat, back rest (3), arm rests, at least one adjusting device for adjusting at least one seat part which is then fixed in the desired position by a locking device, and a handle (7) fixed to the back rest. The handle has a rotating part (9) rotating about the handle axis whose rotational movement is transferred by a Bowden cable (10) to the adjusting device. <??>Preferred Features: Rotation of the rotating part in one direction releases the locking device and rotation in the opposite direction locks the locking device. The locking device is pre-tensioned in the locked position.
