Abstract (en)

[origin: EP1319507A2] The suction device is in the stacker. It consists of first and second partitioning devices (12, 13), which extend along the sheet feed path and across the width of the stacker. The first one is above the slack part (3) of the chain, and has a suction aperture (14). The second one is between the conveying part (4) and slack part of the chain and includes a suction device (15.1).
