Abstract (en)

The present invention relates to a "push-pull" closure (1) for beverage containers, wherein a pouring body (2), composed of a first dispensing portion (6) placed on top of and having a lesser diameter than a second anchoring/retaining portion (7) for anchoring/retaining it on the neck of the said containers and a sleeve-shaped stopper (3) slidably fitted on the said pouring body (2) in a manner such as to be able to assume alternatively an open position and a closed position of the pouring body (2), is integrally connected to the cap (4) by means of a hinge (5). The said closure is particularly practical and hygienic. <IMAGE>
