Abstract (en)

[origin: EP1319766A1] The omega shaped section has a median part and two lateral webs. The median part has a central trapezoidal channel whose sloping sides are connected to the lateral webs by connection parts. The connection device comprises a connection web (32A) constituted from a plane lateral zone (34A) and an intermediate zone (36A). These two zones make an obtuse angle corresponding to the angle made between the connection part and the sloping edge of the section. The connection web is constituted from two parallel lateral zones (34A,35A) located either side the intermediate zone and intended to cooperate with a connection part and with the base of the section.
