Abstract (en)

[origin: EP1319790A2] The anchor structure for a door or window frame is a combination of slabs (1,2), an insulation layer (3), and side units (4) at the ends of the slabs in their recesses and preferably the coverings or frames. The insulation layer between the slabs prevents the transfer of heat and/or sound and/or mechanical loading. The side units are bonded to the slabs by at least one anchor (5), with at least one mounting for the side units. The slabs are preferably prefabricated concrete slabs for fixed constructions.
