Abstract (en)

[origin: EP1319889A1] The device has a supply part (1) and a light source part (2) as separate connectable components, whereby the light source part has one or more light sources (10) supplied with electrical energy by the supply part. The supply and light source parts both have an energy converter (4,14) for energy transfer that can be coupled together to transfer energy between the parts inductively. <??>AN Independent claim is also included for the following: a light system with several inventive devices, a supply part for an inventive device a light source part for an inventive device.
