Abstract (en)  
[origin: WO0224134A1] An absorbent article with a longitudinal direction and a transverse direction (300; 500), comprising a liquid-permeable cover sheet (311; 511), a liquid-tight cover sheet (312; 512), and an absorption body (313; 513) enclosed between the cover sheets (311, 312; 511, 512), and having two side edges (315, 316; 515, 516) extending in the longitudinal direction and two end edges (317, 318; 517, 518) extending in the transverse direction, which article comprises a waist belt (321a, b; 521) formed by at least one layer and arranged substantially parallel to an end edge (318; 518) of the article, and having members (301, 322; 501, 522) for fastening the waist belt around a user's waist, and the article comprises members (301, 325, 326; 501, 525, 526) for fastening the article into a shape similar to underpants. The waist belt (321; 521) comprises a first fastening member (301; 501) having a surface provided with fastening loops (305; 505), said fastening loops (305; 505) being designed to cooperate with a fastening member comprising hook members, and said fastening loops (305; 505) being arranged in a number of chain-like rows of loops (304; 305), each formed by a continuous thread which penetrates through at least one layer in the waist belt (321; 521), said chain-like rows of loops (304; 504) being arranged principally in the longitudinal direction of the article, at right angles to the direction of extent of the waist belt (321; 521), and in addition a second fastening member (323, 324; 523, 524) is arranged on the end edge of the article opposite the waist belt (321, 521), said second fastening member having hook members which are arranged to cooperate with the first fastening member (301; 501) in order to fasten the article into a shape similar to underpants.
