Abstract (en)
[origin: WO0231298A1] The invention relates to a vehicle door latch comprising, in the base structure thereof, a lock (1, 2) consisting of a rotary door latch (1) and a detent (2), as well as a control lever (3) and an electric drive (10, 11, 12, 13). The electric drive (10, 11, 12, 13) allows for electrical opening of the lock (1, 2). A mechanical connection between the control lever (3) and the lock (1,2) can be installed so that the lock (1, 2) can be opened in an emergency. For this purpose, the electric drive (10, 11, 12, 13) is not only responsible for the electrical opening of the lock (1, 2), but also couples the control lever (3) to the rotary door latch (1) and/or the detent (2) in case of an emergency opening.
