Abstract (en)  
[origin: WO0227128A1] The invention relates to a plate part (6) for a hinge plate of a window hinge, door hinge or furniture hinge, which has a fastening pin (15) that can be placed in the door leaf (5) or in the door case (3). Said fastening pin is arranged in a manner that permits it to be displaced in the direction of the longitudinal center axis (19) thereof and with regard to an anchoring bush (36), which is fixed inside a recess (14) of the door leaf (5) or of the door case (3). The fastening pin (15) is mounted inside a hinge part (11) in a manner that permits it to axially rotate about the longitudinal center axis (19) thereof. In addition, the external thread (30) of the fastening pin, which is located on the fastening pin's longitudinal section (29) situated away from the hinge part (11), engages with an internal thread (42) of the anchoring bush (36). The end area of the fastening pin, which projects out of the door leaf (5) or out of the door case (3), comprises a dog area (33) for an adjusting element.
