Abstract (en)  
[origin: WO0218193A2] The invention relates to a device for cutting polymer optical-fibre waveguides, comprising a lower clamping jaw (2), an upper clamping jaw (3), and a blade (4). The lower and upper clamping jaws (2, 3) retain the polymer optical-fibre waveguide (5) that is to be cut in position, by subjecting it to radial pressure on both sides of the cutting point, viewed from the axial direction.
