Abstract (en)
[origin: US2004039653A1] A method for the distribution of pictures over a network, whereby a supplier computer, a web shop computer and a customer computer are connected to the network, whereby a supplier makes a large number of pictures accessible via the network and the purchase is possible via a web shop and whereby the method exhibits the following steps: saving of digital data, which represent the supplier's pictures in a storage device of the supplier computer; assignment of at least one hyperlink to the digital data, whereby the at least one hyperlink is used for initiating an order method for the ordering of at least one picture and refers or contains information which refers to the web shop computer; establishing of a connection between the customer computer and the supplier computer via the network; reading out of the data saved in the storage device of the supplier computer and displaying of the appropriate pictures and the at least one assigned hyperlink on a display device of the customer computer; activation of the hyperlink by the customer for ordering at least one picture; establishment of a connection in response to the activation of the hyperlink between the customer computer and the web shop computer via the network for initiating the order method; execution of the order method and sending of a confirmation query from the web shop computer to the customer computer including reference data which represent the at least one ordered picture; reception of the confirmation query by the customer computer and sending of a confirmation message from the customer computer to the web shop computer for the case where the appropriate order is to be executed; establishment of a connection between the web shop computer and the supplier computer via the network in response to a positive confirmation by the customer; reading out of those digital data which represent the at least one ordered picture by the web shop computer from the storage device of the supplier computer; and processing of the read-out picture data according to the customer's desired picture format.
