Abstract (en)
[origin: WO0221481A1] The present invention relates generally to a method for personal and group improvement. Rational inquiry (10) includes a plurality of questions, methods and observations leading to answers, meanings, ethics, personal essence, purpose and a greater awareness. The questions and observations in the method are provided to the individual in a matrix or a plurality of modules, including practices and inquiries. The matrix or modules, including practices and inquiries are used to assists the individual in determining a minimally assumptive matrix of consistent human internal existence and determining a minimally assumptive matrix of consistent reality. If through comparison of the minimally assumptive matrices, a difference is detected, a disintegration is said to occur. The disintegration is removed by allowing the individual to integrate through a more complete awareness of a limiting belief.
