Abstract (en)

[origin: WO0228135A1] The invention relates to a device and method for generating co-existent communication systems, with a commonly used transmission medium (UM), comprising a data communication interface (1), for carrying out a data transmission within a communication system and a priority determining device (3), for determining at least a typical transmission medium usage priority, whereby the data transmission is carried out, depending upon the determined transmission medium usage priority. The co-existence of independent communication systems can be simply regulated by means of the priority assignment.
