Abstract (en)

Closing device (10) for footwear such as a ski boot (11), snowboarding boot, trekking boot or suchlike, provided with an upper (12) which covers the foot having two front lateral parts (12a, 12b) which can be brought closer together. The closing device (10) comprises a first closing mechanism (13) which closes the two parts (12a, 12b) in correspondence with a first zone of the foot, and a second closing mechanism (20) which closes the two parts (12a, 12b) in correspondence with a second zone of the foot. The first (13) and second (20) closing mechanisms are connected to each other and a single command element (16) commands the simultaneous action of opening/closing the first (13) and second (20) closing mechanisms.
