Abstract (en)

[origin: EP1321172A1] The device is for adjusting the relative position between a ski heelpiece fixing provided with a toothed bar (8) and a runner (2) provided with two opposite teeth (16,17) meshing with the bar teeth. The teeth of one of the parts are offset by a half tooth and the teeth are truncated. The teeth of the two parts alternatively mesh from each side enabling an adjusting step to be had equal to a half tooth.
