Abstract (en)

[origin: EP1321383A1] The refuse collection vehicle has at least one component for monitoring the position of the clamp holder (32,34) for the waste bin (38) and for release of the bin after the clamp holder has reached a predetermined position. The monitoring component is an extension transmitter and/or a rotational angle transmitter. A semi-automatic control unit processes signals received from the positioning monitoring component. The vehicle may be a side loader or a front and side loader.
