Abstract (en)

[origin: EP1321571A2] To spray the surface of a moving web (12), especially of paper or cardboard, at least one jet (14) delivers a spray medium (16) at the web. The volume flow to the jet is adjustable, through at least one valve (20), and the medium flows through a pulsation damper (18) in its path to the jet. The medium is carried from the damper to the jet by a flexible hose (24).
