Abstract (en)

[origin: EP1321605A2] Operating handle, especially a window handle (10), comprises a main handle part (11) and a handle head (12) which change into a handle neck (13), a bore (15) for receiving in a form-locking manner a polygonal driver (25), and a base body (20) positioning the handle neck and having cams (24) for fixing on a stop surface, e.g. in a window frame, and provided with catch devices for fixing preferred handle positions. The base body axially snaps in the handle neck and is connected to a catch body (30) directly interacting with catch elements located inside the handle neck. <??>Preferred Features: The base body has a central bore which movably positions and guides a bushing (32) guiding the polygonal driver inside the handle neck. The base body has a sliding ring (38) in which the handle neck is positioned.
