Abstract (en)
A disk device realizing reducing in size and number of parts, prevention of damage to disks, shortening operation time for plurality of operations, improved vibration resistance and less expensive manufacturing cost is provided. The disk device capable of storing a plurality of disks therein includes a disk holding means capable of changing its vertical position to hold a disk, a driving means to drive the disk holding means, and the disk holding means performs a rotational movement and the changing of its vertical height by means of same driving mechanism of the driving means.
