Abstract (en)

[origin: WO0224294A1] The invention concerns a construction set element (1) adapted to be associated with other similar elements by nesting, formed by assembling several cylinders (2), the top end (3) of each cylinder (2) having a diameter smaller than that of said cylinder (2) over a predetermined height, the bottom end (4) comprising a recess (5) of the same diameter as the top end (3) of said cylinder (2), so that a top end (3) of cylinder (2) can be nested in a bottom end (4) of cylinder (2). The invention is characterised in that it comprises at least three cylinders (2) of similar dimensions, each cylinder (2) being linked to another cylinder (2) by at least one arm (7), the longitudinal axis of each arm (7) being perpendicular to the axes of revolution of said cylinders (2), the longitudinal axes of the arms (7) forming between them an angle of 90 DEG .
