Abstract (en)

[origin: US2003168834A1] The invention relates to a method for producing large-surface markings such as patterns, images, text, company logos, signs or decorative markings. A marking head (5) that is positioned on a mobile device (1), preferably a vehicle, is moved along the surface to be marked with one or more e nozzles (6). Electronic control means (8) control the nozzles (6) of the marking head in accordance with the actual position of the mobile device (1), according to the model to be reproduced. This enables oversized markings to be produced, for example on areas of ground or other suitable surfaces, especially for advertising purposes.
