Abstract (en)

[origin: WO0222359A1] The invention relates to a machine-readable self-adhesive label in which an IC chip is arranged on a support film, in a recess of the adhesive layer that is mounted on said support film. At least one connection contact of said IC chip is electroconductively connected to an electrical conductor that is mounted on the support film, this contact serving as an antenna for contactlessly transmitting data and energy.
