Abstract (en)

[origin: WO0229734A1] The invention relates to a system for starting a motor-driven two-wheeled vehicle. The aim of the invention is to create a simple and reliable system for starting a motor-driven two-wheeled vehicle without a mechanic ignition lock. To this end, the motor-driven two-wheeled vehicle comprises at least one actuating element, the actuation thereof causing an authentication transmitter carried by the driver of the motor-driven two-wheeled vehicle to be authenticated, so that authorization to drive can be granted. The invention also relates to a system for granting the authorization to drive a motorbike.
