Abstract (en)
[origin: EP1323518A2] Hydraulic press device comprises hydraulic devices and a guide box having at one end a longitudinal thrust moving in the guide box and at the other end an outlet (10) of a separating device. One side surface of the guide box moves relative to the other side surface of the guide box and the guide box is closed by a lid arrangement. The outlet is assigned a divided pressure pad arrangement (52, 53) in a portal (4) and the longitudinal thrust has a division (31, 32) corresponding to the division of the pressure pad arrangement. Preferred Features: The separating device has a separating element (51) corresponding to the total pressure pad width (54) of the divided pressure pad arrangement. The first pressure pad and the second pressure pad are independently operated by a separate operating element (6).
