Abstract (en)

Provided is an efficient, shock-absorbable packaging method for packaging and packing pieces of tableware, precision instruments and others so as to protect them from being cracked or broken. The method does not require so many packing materials, and ensures good working environment. In the method, articles to be packaged are wrapped in a thermoplastic resin sheet having a large number of independent, small air-cushion hills, and the thus-wrapped articles are sealed up and degassed whereby the sheet is hermetically adhered to the articles. If desired, the articles may be put on a substrate. A shock-absorbable packaging bag having a fastener disposed at its opening, and an adhesive member disposed inside below the fastener, and equipped with a degassing unit may be used for packaging articles therein. <IMAGE>
