Abstract (en)
The present invention relates to a valve unit for container filling machines, and particularly for bottle fillers. More particularly, the present invention relates to a valve unit (1), particularly for machines for filling containers (7), comprising a hollow body (2) in which a plug (3) is slidably housed, a passage (8) for a fluid (6) for filling the said container (7) being formed in the said hollow body (2), characterized in that the said valve unit comprises means of directing a secondary fluid towards and/or from the container (7), these means being separated from the said passage (8) for the filling fluid (6). <IMAGE>
