Abstract (en)
[origin: EP1323883A2] Door lock comprises a locking mechanism, at least one operating lever, and a securing device with a coupling lever (9), e.g. a child-lock device and/or an antitheft device. The securing device separates the operating lever in its on position from the locking mechanism. A first operating lever (1) and a second operating lever (2) are connected and separated from each other by the coupling lever. <??>Preferred Features: The two operating levers are arranged on the same axis and coplanar to each other. The securing device has a rocker guide (5) for controlling the coupling lever. The first operating lever is connected to a handle (7) and the second operating lever directly or indirectly acts on the locking mechanism.
