Abstract (en)

[origin: EP1324437A1] The contact mechanism between an internal (1) and external unit has one body moving with respect to the other. There is a space with a flexible flat electrical cable (2) with ends fixed to the inner and outer sections, and the flat cable rolling and unrolling on the inner cylindrical piece. A section (3,6,7,8,9) maintains the cable in place. The maintenance section has a trolley section which guides the cable in space following a predetermined path taking up the cable slack.
