Abstract (en)

[origin: WO0226058A1] The invention relates to a method for preparing drinks by the exclusive processing of sea water, and to a corresponding drink. No foreign substances need be added to produce said drinks. The contents in sodium, manganese, potassium and calcium are adjusted as required. Certain trace elements that are characteristic of sea water, such as strontium, nitrites, nitrates, phosphates, aluminum, arsenic, cadmium, cesium, lead, mercury and uranium are substantially removed. Positive trace elements such as for example zinc may remain in the liquid in higher concentrations.
