Abstract (en)
[origin: WO0172206A2] A device is disclosed for introducing a flexible elongated element through at least two portions of a subject. In an embodiment, the device includes a proximal end and a distal end, as well as an advancement unit for longitudinally advancing the flexible elongated element toward the distal end such that a proximal end of the elongated element may pass from the distal end of said device with sufficient force to pass through the portions of the subject. The device also includes a securing unit for variably adjusting a securing force applied by the flexible elongated element to secure together the portions of the subject.
[origin: WO0172206A2] A device is disclosed for introducing a flexible elongated element (58) through at least two portions of a subject (110, 112). The device includes a proximal end and a distal end and an advancement unit (80) for longitudinally advancing the flexible elongated element. The device also includes a securing unit (18) for variably adjusting a securing force applied by the flexible elongated element to secure together the portions of the subject.
