Abstract (en)

[origin: WO0231274A1] The invention concerns a road equipment, such as an inlet, designed to be integrated in a kerb edge (B), and defining therein an opening (30), said edge (3) extending along a first direction. The inventive equipment comprises at least two elements (1, 2) each of which is configured as an open box, said elements (1, 2) adopting an adjustable relative position by selective displacement of the second element (2) relative to the first (1) along two other mutually crossing directions, each of which is transverse relative to the first direction
