Abstract (en)
[origin: EP1325686A2] The device (1) has a roller body (2) with a cover and at least one wear indicator for the cover. The cover has two layers (3,4), at least in parts, especially in the region of the roller that is subject to wear. The layers are different and/or can be distinguished from each other. AN Independent claim is also included for the following: a method of producing at least one strip of filter material for the tobacco processing industry.
